Abstract:

Since, human sustainability has been the subject of a growing amount of research. However, there are many challenges and opportunities associated with the design and implementation of this issue in the enterprise level that have yet to be addressed. The purpose of this article is to identify future directions for research in the design and implementation as part of enterprise sustainability performance measures and reporting. A concise review of key literature published in the past 10 years. The literature review focuses on research conducted at the enterprise level. The review of published literature provides a basis for the identification of a structured set of key research questions to explore future work. The research questions will be of interest to both academics, researchers, and practitioners in enterprise sustainability performance measurement.
