Abstract

The UNINLECO project aims to create a network of experts and professionals who will work together to provide support and education to vulnerable groups. Through the project's activities, the partners hope to empower these groups to fully participate in the digital economy and society, while also promoting the values of democracy, human rights, and social justice.

In addition to the online courses and digital resources, the project will also conduct practical activities, such as workshops, seminars, and training sessions. These activities will provide hands-on experience with digital tools and technology and give vulnerable groups the opportunity to develop new skills and knowledge.

The project also seeks to foster a sense of community and collaboration among its participants. By bringing together experts, professionals, and vulnerable groups, the project aims to create a supportive and inclusive environment where everyone can learn from each other and work together towards a common goal.

Overall, the UNINLECO project is an important initiative that seeks to address the digital divide and promote digital inclusion in Europe. By empowering vulnerable groups with

the skills and resources they need to participate in the digital economy and society, the project aims to create a more equitable and just society for all.
